CURRENT ECONOMIC TRENDS

15-19 April 2019

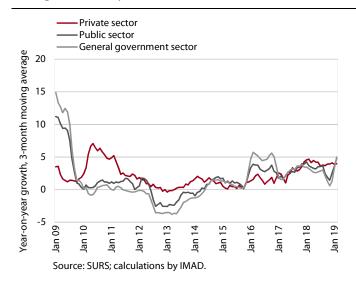

Growth in employment continues at the beginning of the year; labour shortages are reflected in increased employment of foreigners; wage growth has also strengthened. The growth of construction activity is accelerating.

Labour market, February – March 2019

Labour market conditions continued to improve at the beginning of the year. The number of employed persons increased further, particularly in manufacturing and construction. Labour market conditions are increasingly marked by labour shortages and increased hiring of foreigners, who already contribute almost two thirds to total employment growth. The number of registered unemployed declined further in the first three months, though more slowly than in previous years amid the already low level of unemployment. At the end of March, 76,533 persons were registered as unemployed, 5.8% fewer than in the same period of 2018.

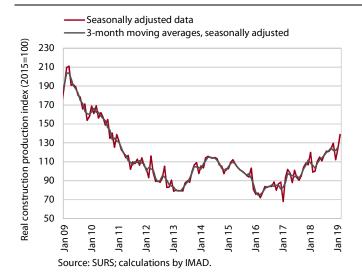

Wages, February 2019

Year-on-year wage growth in the first two months was higher than in the same period of last year.

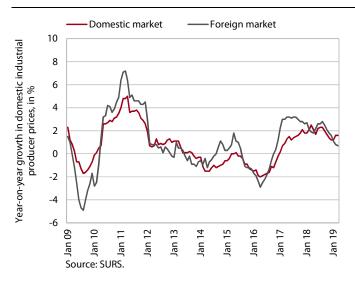

Wage growth in the private sector was, in addition to economic and demographic factors (good business results and gradual productivity growth, labour shortages and related upward pressure on wages), also due to the increase in the minimum wage. Wages rose the most in sectors with high shares of minimum wage recipients that face large labour shortages (trade, accommodation and food service activities and administrative and support service activities). In the public sector, wage growth mainly reflected strong growth in the government sector as a result of the higher valuation of most positions agreed at the end of last year and promotions.

Construction, February 2019

The value of construction output rose significantly in February. After January's growth, this was also due to favourable weather conditions. Their impact was particularly pronounced in comparison with February 2018, as activity was up 40.3% year on year. The increase was the largest in the construction of flats (up 79.6% year on year) and followed the growth of construction permits in previous months. The indicators of contracts, which suggest future activity in construction, also strengthened after a long period of decline. The stock of contracts in construction nevertheless remains lower year on year.

Slovenian industrial producer prices, April 2019

Year-on-year growth in Slovenian industrial producer prices remains just above 1% in the first quarter of the year. In total (both domestic and foreign markets), growth in commodity prices continues to decelerate, while growth in energy prices has strengthened somewhat, mainly owing to price rises in electricity. Stronger growth is also recorded for prices of investment goods, particularly on foreign markets. Prices of other groups on foreign markets mostly decline, amid the moderation of foreign demand. Price growth on the domestic market remains stable, only prices of durable consumer goods being lower year on year.
